

Estimation

Small Panel Estimation Guidelines

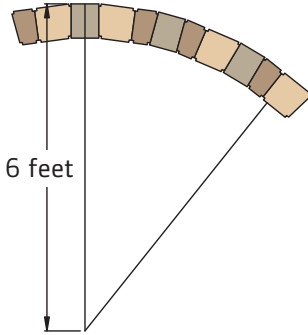

Mosette units required: *small, medium and vertical*

This information will help you estimate Mosette units required for a configuration utilizing *4-unit panels between vertical units*. This arrangement will create a curve radius of about 6 feet (center of circle to outside edge of curve). For straight walls, alternate the orientation of tapered edges. In curved walls, keep the narrow sides of tapered units toward the concave side. Start with a vertical unit on the lower wall half and a section of four small units on the upper wall half. This will help avoid too many vertical joint lines and improve wall strength. Turn and flip units, as desired, within the wall to maximize a random appearance.

Small Unit
 Medium Unit
 Vertical Unit

The following estimation figures are for a Small-Panel Mosaic wall with a height of 24 inches. Lengths listed permit ends of straight walls to finish evenly. Splitting and/or cutting of units may be necessary for other lengths and for curved walls.

Wall Length	Small	Medium	Vertical
18" (1' 6")	4	4	2
27" (2' 3")	12	4	2
45" (3' 9")	16	8	4
63" (5' 3")	20	12	6
81" (6' 9")	24	16	8
99" (8' 3")	28	20	10
117" (9' 9")	32	24	12
135" (11' 3")	36	28	14
153" (12' 9")	40	32	16

Mosette permits an unlimited number of variations. Feel free to experiment with your own designs.
